¿Y cuál es el plan?

(Responsive Design / Mobile First)

Front Page **Administer**

Drupal Mobile Navigation Prototype

Iteration Three Update Details

1. Completely rebuilt from the ground up to reduce load and make it more expandable.
2. Navigation through the admin tree is handled using AJAX rather than full page reloads
3. Integrated swipecjs for one to one gesture navigation (HOT)
4. Spotlight for Drupal! Global search! Your milage may vary because it is buggy
5. Added page specific actions such as: filter, add, and delete
6. Added a page that notifies the user that a location has been intentionally left out of this stage of the prototype. Disagree? [Let me know.](#)
7. Replaced some

[Announcing Spark: authoring improvements for Drupal 7 and Drupal 8](#)

Spark aims to be "the [Pressflow](#) of Drupal authoring experience." The goal of Spark is to act as an incubator for Drupal 8 authoring experience improvements that can be tested in the field on real sites with real users and real content as a Drupal 7 distribution.

Our first focus is on [in-place editing](#). Here's a video showing our current thinking:

<http://drupal.org/project/spark>

Cada cosa en su sitio (In-place Editing)

The screenshot shows the Examiner.com website with a draft article titled "Earl Scruggs" being edited. The interface includes a top navigation bar with "View", "Edit", and "Publish" buttons. A search bar with the Google logo is visible. The main content area features a "Music Business" banner for Full Sail University. The article being edited is titled "Legendary musician Earl Scruggs dead at 88" and is dated March 28, 2012. The author is Sterling Whittier, a Nashville Music Industry Examiner. The article text begins with "Legendary country and bluegrass musician Earl Scruggs". A "NEXT ARTICLE" section on the right promotes an article about Earl Scruggs' funeral. At the bottom, there are advertisements for muscle building and learning secrets. A URL is displayed at the bottom of the page: <http://buytaert.net/spark-update-in-line-editing-in-drupal>.

(Responsive Layouts)

The screenshot shows a web application interface for editing a responsive layout. At the top, there is a dark navigation bar with a home icon and the text "Home", a gear icon and the text "Administration", and a user profile icon with a dropdown arrow. Below this is a lighter navigation bar with "Edit" and "Export" buttons. The main content area has a breadcrumb trail: "Home » Administration » Structure » Panels". The title "Edit layout default" is prominently displayed. Under the heading "Administrative title", there is a text input field containing "Default responsive layout" and a label "Machine name: default". A note below states: "This will appear in the administrative interface to easily identify it." Below the text input, there are three device icons with their respective widths: a smartphone icon for "320px", a tablet icon for "760px", and a desktop monitor icon for "1010px". The main workspace shows a layout editor with a button "Add region to top" at the top. Below it, there are four stacked regions, each with a light blue header bar and a dark grey content area. The regions are labeled "Header A", "Header B", "Header C", and "Subheader A". Each region has a small circular icon with an 'x' in the top right corner, likely for deleting the region. A left sidebar with a right-pointing arrow is partially visible on the far left.

Help Fund Views In Core

Posted by Merlin on Tue, 05/22/2012 - 10:18am

At Drupalcon Denver, I approached Dries with the idea of putting Views into Drupal core for the Drupal 8 release. The idea was met very positively, and I've begun the work of putting together a team and resources and the things required to do this. Obviously, it's a big job, on the scale of initiatives like **Mobile**, **CMI**, **WSCCI**, etc.

This initiative will be called VDC, or Views in Drupal Core. The goal of this initiative is to put Views as we know it into Drupal core and properly integrate it so that everything is seamless. The fantastic UX work that Acquia funded last year already works very well with the core style, and we can continue to build on that to make it simply part of the Drupal experience.

For many years, large portions of the community have asked repeatedly why Views isn't in core. Many of those answers are fading: Core's processes are now capable of handling large projects. Views' development needs have slowed as it has matured and gotten more feature-filled. It's well known that Views and CCK, together, catapulted Drupal from having tens of thousands of installed sites to hundreds of thousands of installed sites by significantly reducing the amount of work needed to build complex functionality. CCK is in core now, but Views is not.

¿Drupal 8?

The screenshot shows the Drupal 8 administration interface. At the top is a dark navigation bar with links: Home, Content, Structure, Appearance, People, Extend, Configuration, and Reports. On the right of this bar, it says "Hello admin" and "Log out". Below this is a grey bar with "Add content" and "Find content" on the left, and "Edit shortcuts" on the right. The main header is a blue banner with the Drupal logo and "Drupal 8" on the left, and "My account" and "Log out" on the right. Below the banner is a white sidebar with a "Home" button and a "Navigation" section containing a link to "Add content". The main content area has the heading "Welcome to Drupal 8" and the message "No front page content has been created yet." with a link to "Add new content". The footer is a dark grey bar with the text "Powered by Drupal".

Apply

Introduced in branch/version	Notice created	Change
8.x, 7.x / 7.15	23-May-2012	DANGEROUS_ACCESS_CHECK_OPT_OUT query tag added to EntityFieldQuery
8.x, 7.x / 7.14	22-May-2012	Database columns are fetched with natural casing
8.x	21-May-2012	File reference checks removed from file_delete(), file status is now managed by file usage API.
8.x	20-May-2012	Installing Drupal without making settings.php writable now requires the config directory to be manually specified
8.x	12-May-2012	node_type_get_type() has been removed
8.x	12-May-2012	Paths containing content type names no longer replace underscores with dashes
8.x	10-May-2012	All core JavaScript run in strict mode
8.x, 7.x / 7.14	09-May-2012	The field_bundle_settings variable has been split into per-bundle variables
8.x	09-May-2012	Internet Explorer 6 and 7 no longer fully supported
8.x	06-May-2012	Cron is now a normal Drupal URL

En camino

Tuesday, October 23, 2012

A close-up photograph of a baby with light brown hair and blue eyes, looking directly at the camera with a serious, almost angry expression. The baby is holding a fistful of sand in their right hand. They are wearing a green and white long-sleeved shirt. The background is a blurred beach scene with sand and water.

Time to kick ass
with Drupal 8!
